

How to test your spreader settings?

Empty approximately 10 to 15 pounds of GARDEN PEARLS[®] into your spreader. Set spreader to very low setting and spread over a 1,000 ft² area (33 x 30 feet or 40 by 25 feet or equivalent). If you use all the pearls in this area your setting is accurate.

It is always best to start with the lowest setting and make several passes over your lawn or adjust the spreader setting upward after you judge how much more you need to apply to your area. GARDEN PEARLS[®] products will not burn even if you apply a bit too much.

Approximate Spread Settings Settings per 1,000 Sq. Ft.

Spreader Model	Calcium 12.5lbs	Gypsum 25lbs	Fertilizer 50lbs
2 Wheel Cyclone	4	6	8
20" Sears	6	8	10
Central Model 50		8.5	10
Earthway Drop Spreader	24	24*	24**
Earthway Ev-N Spred Broadcast	22	22*	23**
Lely	2 ½ l	4 l	4 ¾ l
Lesco Rotary Spreader	E	H	P ½
Scotts (Broadcast)	J		
Scotts (Drop)	6.5	7.5	8.5
Scotts sr2000/ Accurpro	1 ½	L ½	N
Spyker Broadcast	4	7.0	10*
Spyker Cyclone	4	6	7*
Vicon	15	25	32

* Make 2 passes in a criss-cross pattern.

** Make 3 passes in an alternating pattern.

NOTE: Spreader settings are approximate. Actual settings depend on spreader model, age, condition and speed of application. Consult your spreader manual or manufacturer for additional guidelines.

GARDEN PEARLS[®] are easy to apply and will not burn your lawn if used correctly.

The distribution of GARDEN PEARLS[®] when applied correctly.
