

GARDEN PEARLS® Gypsum

Calcium and Sulfur Nutrition

Garden Pearls® **Gypsum** adds calcium without changing soil pH, and provides necessary nutrients, sulfur and calcium. Garden Pearls® solubility quickly moves these nutrients through the soil profile and into root zone. Calcium provides many plant essential functions, including cell wall strength, cell membrane function, and disease resistance. Sulfur, in the proper sulfate form, will aid the plant in chlorophyll and protein production and synthesis of certain plant hormones. Sulfur also increases a plant's efficient use of nitrogen. Garden Pearls® Gypsum will also improve soil structure.

Benefits of Garden Pearls Gypsum

- Adds Calcium
- Will not change pH
- Provides Plant Food Sulfur
- Improves soil structure
- Supplies Calcium for acid loving crops
- Leaches out harmful Sodium
- Improves water infiltration
- Easy to incorporate into your soil
- Waters right in
- Great for your compost pile
- Approved for organic gardens
- Safe to handle, non-caustic, will not burn

Easy to handle pelletized gypsum.

Sprinkle by hand, spread with fertilizer spreader or add to compost. Application is simple, apply at rates recommended by soil test.
